

SASTRA 2027 GRADUATE HIRING

GROWTH ENGINEER ROLE

Seven-day individual assessment | Creators only

Goal: Review the current IncuBrix product, deliver at least 1,000 validated creator leads, and build an automated process that IncuBrix can rerun and refresh to collect qualified leads and validate it. Delivering 10,000 leads at a higher quality is exceptional.

1. What you must deliver

Part	Required outcome
Product review	Test the available product journey. Submit 5 clear observations and 5 prioritized improvements, each supported by evidence.
Creator leads	Submit at least 1,000 unique, qualified creators in leads.csv and the official workbook. Mark the best 25 as Priority A.
Automated engine	Provide code or a workflow that finds, checks, removes duplicates, scores, exports and refreshes leads. Include a README and a short demo.
Go-to-market summary	State the best creator segment, countries, common need, recommended first channel and message approach. Do not contact creators.

2. Who to target

- Creators only: podcasters/video podcasters, YouTubers/video-first creators and expert-led creators. Do not include agencies, management firms, generic brands, publications, directories or fan accounts.
- Focus on developed, English-speaking markets. At least 80% of submitted creators must be from the United States, Canada, United Kingdom, Ireland, Australia, New Zealand or Singapore. Use at least 3 countries, and no country may exceed 60%.
- The creator's recent content must be mainly in English. Use only public, consented or appropriately licensed business information.

3. When a creator counts as qualified

A creator is counted only when every requirement below is complete and supported by a working public source link.

Check	Simple requirement
Real and relevant	A real creator in an approved segment and country, with an official profile and stable platform ID.
Active	Either 8 content items in the last 30 days or 2 long-form content items in the last 60 days.
Commercial	Public evidence of a sponsorship, product, service, course, membership, subscription, affiliate offer or similar commercial activity.
Needs IncuBrix	Evidence of a need involving content creation, repurposing, editing, captions, publishing, consistency, backlog or team workflow.
Contactable	A verified public business email, contact form, booking page or business contact route. Guessed contacts are not allowed.
Complete and unique	All required workbook fields are complete, evidence was checked within 30 days, and the creator appears only once in the final list.

Minimum result: 1,000 unique qualified creators; at least 85% of IncuBrix's audit sample must qualify; at least 90% of sampled business contacts must be correct; final duplicate rate must be 0%; and the engine must rerun successfully.

SUBMISSION AND EVALUATION

4. Submit these five items

Item	What to submit
1. Workbook	Complete the official Excel template. Yellow cells are candidate inputs; blue/gray cells are guidance or calculations.
2. Lead file	UTF-8 leads.csv using the same columns as the workbook. This is the full authoritative lead list.
3. Engine	Private repository or shared folder containing code/workflow, configuration, tests and README with one clear run command. Do not include passwords or secret keys.
4. Product proof	Evidence links or screenshots, 5 observations, 5 improvements and an unedited product-review video of up to 5 minutes.
5. Technical proof	An unedited video of up to 8 minutes showing one normal run, duplicate removal, a refresh and recovery from one simple failure (if any)

5. How IncuBrix evaluates

Area	Points	What good performance looks like
Product review	15	Clear evidence, useful observations and improvements that can be tested.
Lead quality and go-to-market value	30	Creators genuinely fit IncuBrix, evidence and contacts are correct, data is clean, and Priority A leads are useful.
Automation and scale	25	Another reviewer can run the engine; duplicate removal, refresh, logs, tests and failure recovery work.
Live validation	30	The candidate owns the work, traces random leads, runs the engine on new input and explains decisions honestly.

Final result: below 65 = does not progress | 65-74 = meets baseline | 75-84 = strong candidate | 85+ = exceptional, only when all exceptional requirements also pass.

6. Independent validation

- IncuBrix freezes the submitted files and recalculates lead counts and duplicate checks. Candidate-entered totals are not official.
- IncuBrix selects 100 leads after submission: 80 submitted as qualified and 20 rejected. The candidate cannot choose or replace the sample.
- Reviewers verify creator fit, evidence and business contacts. For a 10,000-lead submission, IncuBrix checks at least 200 leads.
- During the live review, the candidate traces 5 random leads, reruns the engine on a small new input, resolves one duplicate and explains one product and one go-to-market recommendation.
- A recruiter/growth reviewer and an engineering manager score independently. Any adjustment must cite evidence in the workbook.

7. Exceptional result

- At least 10,000 unique creators, with at least 90% of the official sample qualifying and at least 95% sampled contact accuracy.
- The engine completes a clean refresh, keeps 0% final duplicates and demonstrates practical runtime and cost at 10,000 rows.
- At least 250 leads are Priority A, supported by a clear market recommendation and the strongest 25 creator opportunities.

8. Integrity rules

- Work individually. Disclose AI tools, paid/free data sources and any manual work. No tool brand is required and no paid tool is necessary.
- Do not contact creators, guess contacts, use private/leaked/restricted data, bypass access controls or hide manual work.
- Fabricated creators, evidence, contacts, metrics or ownership; unlawful data; or inability to explain and reproduce the core work may disqualify the submission.
- If a product feature or source is unavailable, record it with date/time and evidence. You are not expected to bypass restrictions.

Final check: Before submitting, confirm: 5 observations, 5 improvements, at least 1,000 qualified creators, 25 Priority A leads, no final duplicates, working evidence and contacts, a repeatable engine, completed workbook, leads.csv, README, repository access and both demo links.
